SureStrain™ Cell Strainers

Premium Cell Strainers from 5µm to 100µm

SureStrain™ Cell Strainers are now available in eight different pore sizes, ranging from 5µm to 100µm. The 5 new pore sizes allow for finer control over cell aggregates and clump filtration.

The SureStrain™ Premium Cell Strainer system is a fast and easy-to-use solution for detaching, isolating, and straining cells from clusters and tissues in preparation for flow cytometry.

The advanced polypropylene frame design also contributes to superior performance and reduced processing time by eliminating the “air-lock” effect. Improved aeration allows air to escape while filtrate passes through the nylon mesh into the tube, preventing messy spillovers.
