## 1 Operating instructions

### 1.1 Using this manual

- ▶ Read this operating manual completely before using the device for the first time. Also observe the instructions for use of the accessories.
- ▶ This operating manual is part of the product. Thus, it must always be easily accessible.
- ▶ Enclose this operating manual when transferring the device to third parties.
- ▶ You will find the current version of the operating manual for all available languages on our website under [www.eppendorf.com/manuals](http://www.eppendorf.com/manuals).

## 1.2 Danger symbols and danger levels

### 1.2.1 Danger symbols

The safety instructions in this manual have the following danger symbols and danger levels:

|  |                       |  |                        |
|--|-----------------------|--|------------------------|
|  | <b>Electric shock</b> |  | <b>Hazard point</b>    |
|  | <b>Cuts</b>           |  | <b>Material damage</b> |
|  | <b>Biohazard</b>      |  |                        |

### 1.2.2 Danger levels

|                |   |
|----------------|---|
| <b>DANGER</b>  | Will lead to severe injuries or death.  |
| <b>WARNING</b> | May lead to severe injuries or death.   |
| <b>CAUTION</b> | May lead to light to moderate injuries. |
| <b>NOTICE</b>  | May lead to material damage.            |

## 1.3 Symbols used

| Depiction   | Meaning                           |
|-------------|-----------------------------------|
| 1.          | Actions in the specified order    |
| 2.          |                                   |
| ▶           | Actions without a specified order |
| •           | List                              |
|             | Direction of movement             |
| <i>Text</i> | Display text or software text     |
|             | Additional information            |

## **2 Safety**

### **2.1 Intended use**

The FemtoJet 4i Microinjector is designed and manufactured for the exclusive use within the context of biological, chemical and physical research.

Together with the micromanipulator and the capillary, the Microinjector forms a microinjection system. The Microinjector is used for the precise and reproducible injection of extremely small amounts of fluid (femto liter to micro liter range) in biological cells or nuclei.

The Microinjector is intended exclusively for indoor use and for operation by qualified staff.

### **2.2 Warnings for intended use**

---

#### **WARNING! Risk of injury due to flying capillaries and glass splinters.**

If exposed to high pressures, capillaries can detach themselves from the grip heads and become projectiles.

Capillaries can crack as a result of incorrect handling.

- ▶ Wear protective goggles.
- ▶ Never aim capillaries at people.
- ▶ Use capillaries with an outer diameter that matches the grip head specifications.
- ▶ Always mount / dismount capillaries when they are depressurized.
- ▶ Mount the capillary correctly in the grip head.
- ▶ Do not touch the capillary with the Petri dish or other objects.

#### **CAUTION! Risk of cuts from broken capillaries.**

Capillaries are made of glass and are very fragile.

- ▶ Wear your personal protective equipment (PPE).
- ▶ Always mount capillaries depressurized.
- ▶ Never aim capillaries at people.
- ▶ Handle the capillaries very carefully.

### **WARNING! Damage to health due to infectious liquids and pathogenic germs.**

- ▶ When handling infectious liquids and pathogenic germs, observe the national regulations, the biological safety level of your laboratory, the material safety data sheets, and the manufacturer's application notes.
- ▶ Wear your personal protective equipment.
- ▶ Consult the "Laboratory Biosafety Manual" (source: World Health Organization, Laboratory Biosafety Manual, in its respectively current valid version).

## **2.3 Warning signs on the device**

| Warning symbol | Meaning                   |
|----------------|---------------------------|
|                | Read the operating manual |

## **2.4 User profile**

The device and accessories may only be operated by trained and skilled personnel.

Before using the device, read the operating manual carefully and familiarize yourself with the device's mode of operation.

## **2.5 Information on product liability**

In the following cases, the designated protection of the device may be compromised. Liability for any resulting property damage or personal injury is then transferred to the operator:

- The device is not used in accordance with the operating manual.
- The device is used outside of its intended use.
- The device is used with accessories or consumables which are not recommended by Eppendorf.
- The device is maintained or repaired by people not authorized by Eppendorf.
- The user makes unauthorized changes to the device.

#### **3.1 Delivery package**

| Quantity | Description   |
|----------|---|
| 1        | FemtoJet 4i   |
| 1        | Injection tube  |
| 1        | Capillary holder 4  |
| 1        | Grip head 4 for capillaries with an outer diameter of 1.0 to 1.1 mm |
| 1        | Adapter for Femtotips   |
| 1        | Foot control  |
| 1        | Mains/power cord  |
| 1        | Bag (for rotary knobs)  |
| 1        | Operating manual  |

#### **3.2 Features**

The Microinjector can be used to inject very small amounts of fluid into cells. The parameters for pressure and time are set on the device and controlled by the software. It is possible to trigger the injection on the Microinjector or on a connected micromanipulator by Eppendorf. The semiautomatic injection movement is controlled by the Microinjector or the micromanipulator. The required pressure is generated by a soundproof internal compressor.

### 3.3 Exemplary set-up of a microinjection system

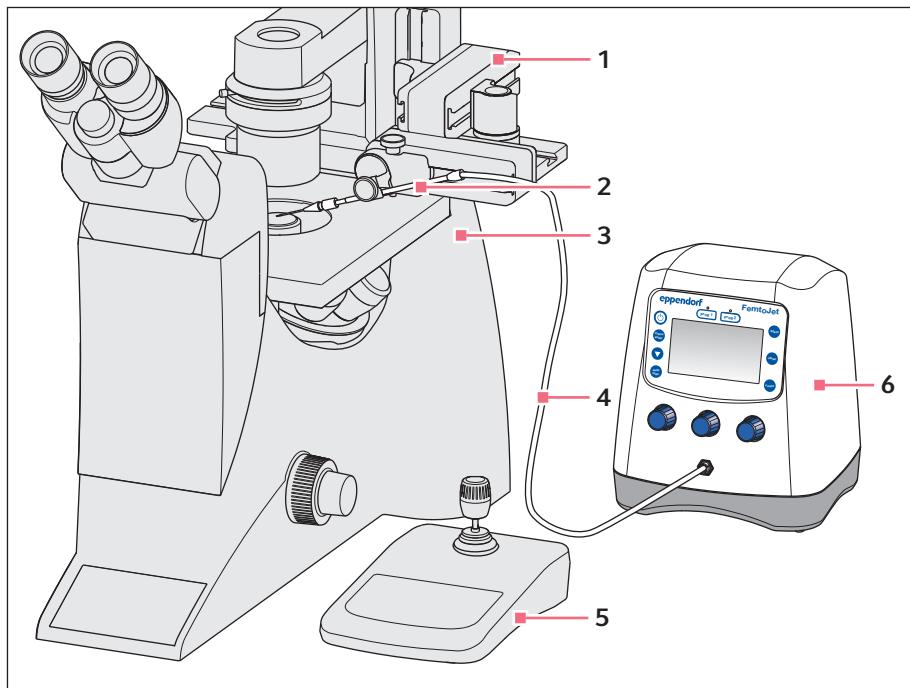

Fig. 3-1: Microinjection system with FemtoJet 4i

- |  |                             |
|--|-----------------------------|
| 1 Micromanipulator InjectMan 4                 | 4 Injection tube            |
| 2 Universal capillary holder with<br>capillary | 5 Control board InjectMan 4 |
| 3 Inverse microscope                           | 6 Microinjector FemtoJet 4i |

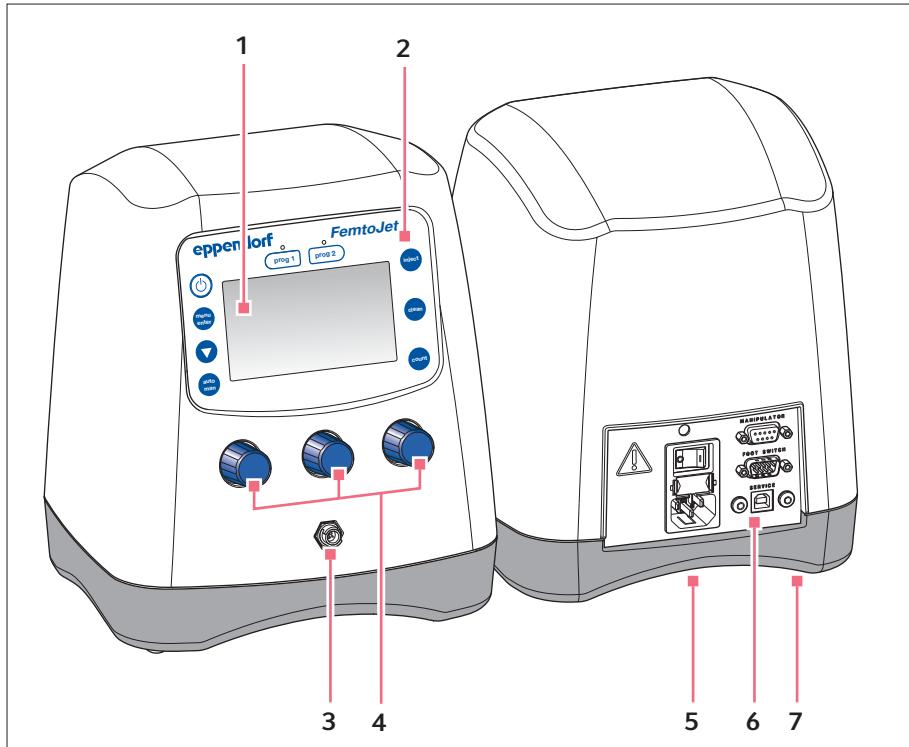

**3.4 Product overview**

Fig. 3-2: Front and rear side

### 3.6 Control panel

The keys of the control panel are used to switch on the Microinjector, to perform functions, to select programs and to navigate through the menu.

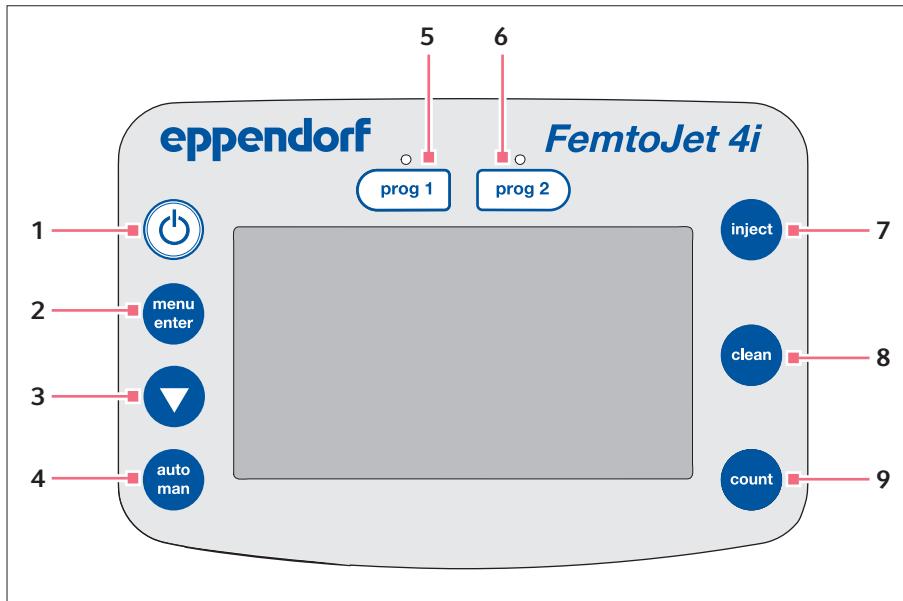

Fig. 3-5: Control panel

- |   |  |
|---|--|
| <b>1</b> <i>standby key</i><br>Activate/deactivate standby mode               | <b>6</b> <i>prog 2 key</i><br>Select or save parameter set 2 |
| <b>2</b> <i>menu enter key</i><br>Open the menu                               | <b>7</b> <i>inject key</i><br>Perform an injection           |
| <b>3</b> <i>Arrow key</i><br>Navigate the menu                                | <b>8</b> <i>clean key</i><br>Clean the capillary             |
| <b>4</b> <i>auto man key</i><br>Toggle between automatic and manual injection | <b>9</b> <i>count key</i><br>Set the counter to zero         |
| <b>5</b> <i>prog 1 key</i><br>Select or save parameter set 1                  |  |

### 3.7 Rotary knobs

The rotary knobs are used to set the injection parameters as injection time, injection pressure and compensation pressure.

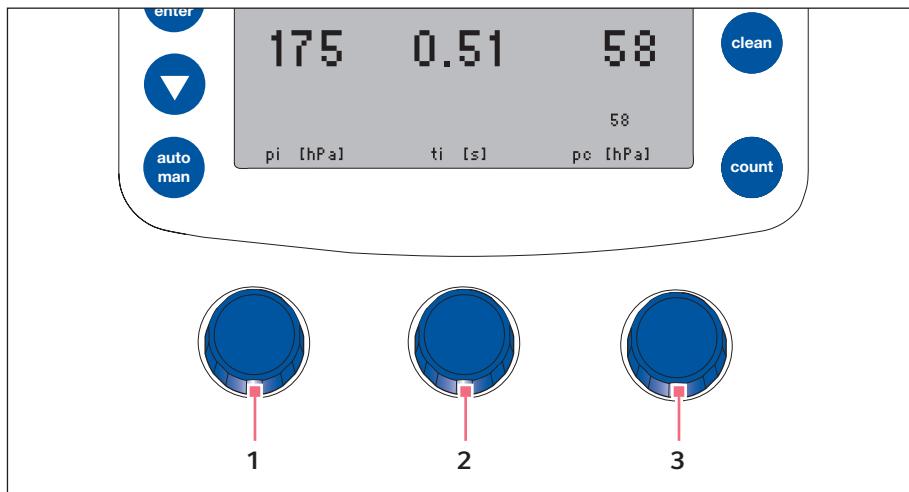

Fig. 3-6: Rotary knobs

**1 Rotary knob**

Set the injection pressure  $p_i$

**2 Rotary knob**

Set the injection time  $t_i$

**3 Rotary knob**

Set the compensation pressure  $p_c$

### 3.8 Foot control

You can connect the foot control to the Microinjector.

The foot control corresponds to the following key on the Microinjector:

- Foot control – *inject* key

**i** The *inject* key remains active when the foot control is connected.

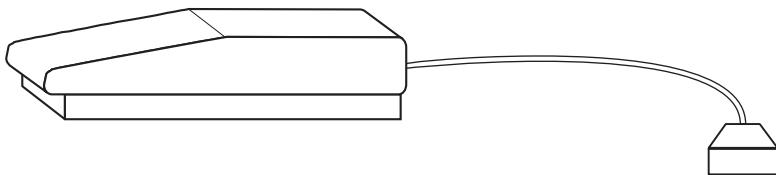

Fig. 3-7: Foot control with plug

### 3.9 Hand control

**i** The hand control is not included in the delivery package and must be ordered separately.

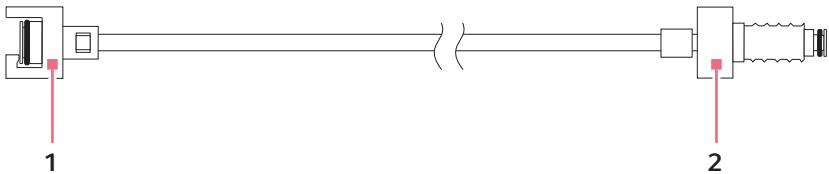

You can connect the hand control to the Microinjector.

The hand controls correspond to the following keys on the Microinjector:

- Left hand control – *inject* key
- Right hand control – *clean* key

**i** The *inject* and *clean* keys remain active when the hand control is connected.

### 3.10 Injection tube

**1 Bayonet coupling**  
FemtoJet connection

**2 Bolted connection**  
Connection for universal capillary holder

### 3.11 Pressure parameters

The parameters are used to define the pressure and time for the injection and the cleaning of the capillary.

The pressure parameters include the following parameters:

- Compensation pressure –  $p_c$
- Injection pressure –  $p_i$
- Injection time –  $t_i$
- Operating pressure
- Rinsing pressure

### 3.11.1 Compensation pressure $p_c$

The compensation pressure prevents the liquid from rising from the Petri dish into the capillary due to the capillary action. Due to the compensation pressure, some liquid will leak constantly from the capillary tip. This prevents the injection material from clumping together.

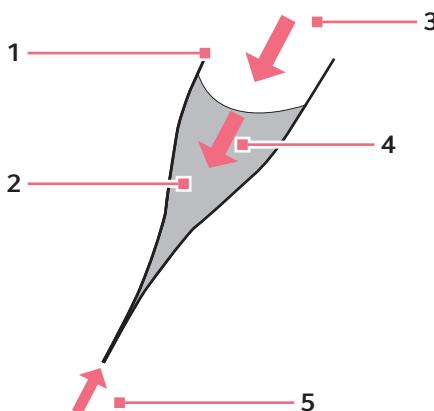

Fig. 3-8: Pressure ratios in the capillary

- |                                  |                        |
|----------------------------------|------------------------|
| 1 Capillary                      | 4 Hydrostatic pressure |
| 2 Liquid with injection material | 5 Capillary action     |
| 3 Compensation pressure $p_c$    |                        |

### 3.11.2 Injection pressure $p_i$

The injection pressure defines the pressure used for injecting liquid into the cell. During the injection process, the injection pressure is applied as long as the injection time is running. To inject liquid into a cell, the injection pressure must be higher than the inside pressure of the cell.

### 3.11.3 Injection time $t_i$

The injection time defines the time period for injecting the liquid. The start of the injection time depends on the presettings of the micromanipulator. The injection time begins either when triggering the injection function or when reaching the lower safety limit. The injection pressure is applied as long as the injection time is running.

### **3.11.4 Rinsing pressure**

The rinsing pressure is used to clean the capillary.

### **3.11.5 Operating pressure $p_w$**

The operating pressure subsumes the injection pressure, compensation pressure and rinsing pressure.

## **3.12 Self-calibration**

The Microinjector performs a calibration every two hours. During the calibration, the ventilation valve opens and the collected condensation water is discharged.

## **3.13 Capillary holder 4**

You can insert a capillary or a Femtotips in capillary holder 4.

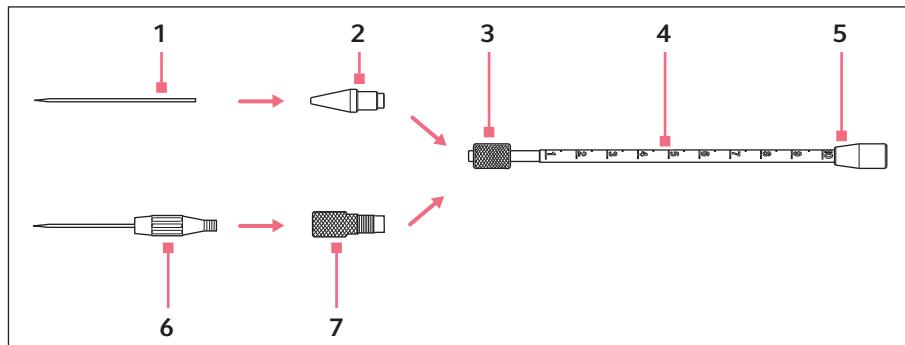

Fig. 3-9: Capillary holder 4

- |                             |                                  |
|-----------------------------|----------------------------------|
| <b>1 Capillary</b>          | <b>5 Port for injection tube</b> |
| <b>2 Grip head 4</b>        | <b>6 Femtotips</b>               |
| <b>3 Knurled screw</b>      | <b>7 Adapter for Femtotips</b>   |
| <b>4 Capillary holder 4</b> |                                  |

### 3.14 Grip head 4

The grip head is inserted in the capillary holder. There are different grip head sizes available for different capillary diameters. Grip heads can be differentiated based on the number of grooves they have.

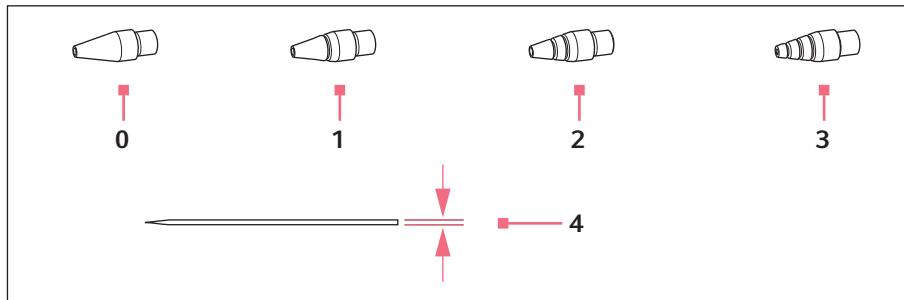

Fig. 3-10: Grip head sizes

**0 Size 0**

For capillary diameters from  
1.0 to 1.1 mm

**1 Size 1**

For capillary diameters from  
1.2 to 1.3 mm

**2 Size 2**

For capillary diameters from  
1.4 to 1.5 mm

**3 Size 3**

For capillary diameters from  
0.7 to 0.9 mm

**4 Capillary diameter**

## **4 Installation**

### **4.1 Preparing installation**

Store the packaging for later transport or storage.

In case of visible damages on the Microinjector or the packaging, do not commission the Microinjector.

1. Check the packaging for damage.
2. Check that everything is included in the delivery.
3. Check the Microinjector and the accessories for damages.

#### **4.1.1 Complaints about damages**

- ▶ Contact your local Eppendorf distribution partner.

#### **4.1.2 Incomplete delivery**

- ▶ Contact your local Eppendorf distribution partner.

## **4.2 Selecting the location**

Please select the location for the Microinjector according to the following criteria:

- Suitable mains/power connection in accordance with the name plate.
- A bench with a horizontal and even work surface which is designed to support the weight of the Microinjector.

The mains/power switch and cutting unit of the mains/power line must be easily accessible during operation (e.g., residual current circuit breaker).

## **4.3 Connecting the Microinjector**

Prerequisites

- Electrical connection data according to the name plate.
  - The Microinjector is switched off.
- ▶ Connect the power cable.

#### 4.4 Inserting o-rings in the grip head

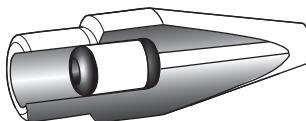

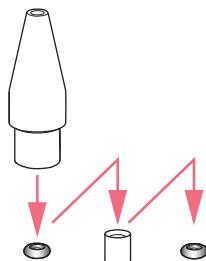

Fig. 4-1: Cross-section of the grip head with correctly inserted o-rings and distancing sleeve

##### Prerequisites

- The o-rings and the distancing sleeve are clean and free of damage.
- The grip head is clean and free of damage.
- A flat and clean surface is available.

1. Place the o-rings and the distancing sleeve on a flat surface.
2. Press the grip head vertically onto the first o-ring and push it into the grip head with the capillary holder.
3. Press the grip head vertically onto the distancing sleeve and push it into the grip head with the capillary holder.
4. Press the grip head vertically onto the second o-ring and push it into the grip head with the capillary holder.

## 4.5 Connecting an external device

The following devices can be connected to the Microinjector:

- Micromanipulator (InjectMan 4, TransferMan 4r or InjectMan NI 2)
- Computer

### 4.5.1 Connecting a micromanipulator

Prerequisites

- Y-cable FJ4 is available.
- The Microinjector is switched off.
- The micromanipulator is switched off.

The operation is described in the manual for the micromanipulator.

1. Connect the Y-cable to the MANIPULATOR port.
2. Connect the micromanipulator to the Y-cable.
3. Switch on the Microinjector.  
The initialization phase starts.  
After completion of the initialization phase, the main screen appears.

### 4.5.2 Connecting the PC

Prerequisites

- Y-cable FJ4 is available.
- Devices are switched off.

Control with a PC is described in the **Cell Technology · PC Control** manual.

1. Connect the Y-cable to the MANIPULATOR port.
2. Connect the computer to the Y-cable.
3. Switch on the Microinjector.  
The initialization phase starts.  
After completion of the initialization phase, the main screen appears.

### 4.5.3 Connecting two devices

Prerequisites

- Y-cable FJ4 is available.
- Devices are switched off.

Two devices can be connected with the Y-cable FJ4.

The following combinations are possible:

- Computer
- Micromanipulator

 Control with a PC is described in the **Cell Technology · PC Control** manual.

 The operation is described in the manual for the micromanipulator.

1. Connect the Y-cable to the MANIPULATOR port.

2. Connect the computer to the Y-cable.

3. Connect the micromanipulator to the Y-cable.

4. Switch on the Microinjector.

The initialization phase starts.

After completion of the initialization phase, the main screen appears.

## 4.6 Connecting accessories

It is possible to connect the following accessories to the Microinjector:

- Foot control or
- Hand control

### 4.6.1 Connecting a foot control

Prerequisites

- The Microinjector is switched off.

1. Connect the foot control to the FOOT SWITCH port.

### 4.6.2 Connecting a hand control

Prerequisites

- The Microinjector is switched off.
- No foot control has been connected.

 The hand control is not included in the delivery package and must be ordered separately.

► Connect the hand control to the FOOT SWITCH port.

## 5 Software

### 5.1 Main screen

The main screen displays all injection parameters, the selected pressure unit, the injection mode and the number of injections.

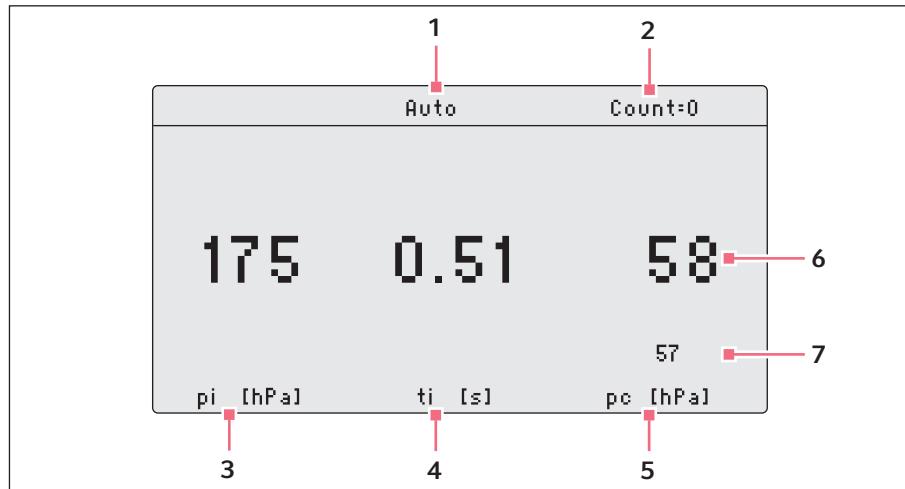

Fig. 5-1: Main screen splitting

- |   |  |
|---|--|
| <b>1 Injection mode</b><br>Automatic or manual injection                                  | <b>5 Parameter for compensation pressure <math>p_c</math></b><br>Pressure unit in hPa or PSI |
| <b>2 Injection counter</b>  | <b>6 Line with set values</b>  |
| <b>3 Parameter for injection pressure <math>p_i</math></b><br>Pressure unit in hPa or PSI | <b>7 Line with actual values</b>   |
| <b>4 Parameter for injection time <math>t_i</math></b><br>Time in seconds                 |  |

## 5.2 Main menu

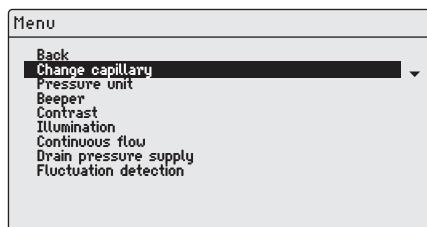

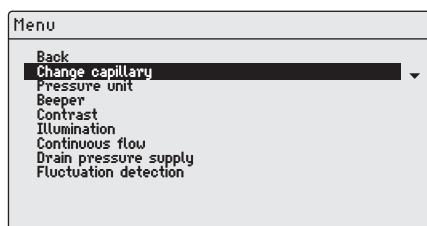

Fig. 5-2: Main menu

| Menu                  | Parameter   |
|-----------------------|---|
| Change capillary      | Replace the capillary.  |
| Pressure unit         | Set the unit for pressure (hPa or PSI).                                 |
| Beeper                | Switch the signal tone on or off.                                       |
| Contrast              | Set the display contrast.   |
| Illumination          | Switch the display illumination on or off.                              |
| Continuous flow       | Set a fixed value for a continuous pressure.                            |
| Drain pressure supply | Open the venting for a short time and discharge the condensation water. |
| Fluctuation detection | Switch leak sensor on or off, e.g. to detect capillary breakage.        |

## 5.3 Navigating in the menu

### 5.3.1 Selecting the menu and navigating

1. Press the *menu enter* key.  
The menu appears.
2. To select a menu entry, press the arrow key.  
The menu entry is shown with a black bar.

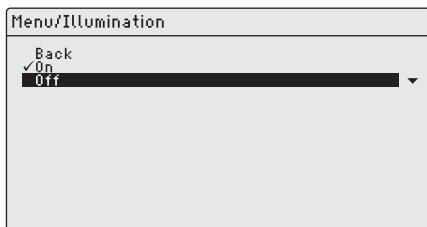

### 5.3.2 Exiting the menu

1. Select the submenu *Back*.
2. Press the *menu enter* key.  
The main screen appears.

### 5.3.3 Selecting parameters

Prerequisites

- A submenu with parameters is selected.

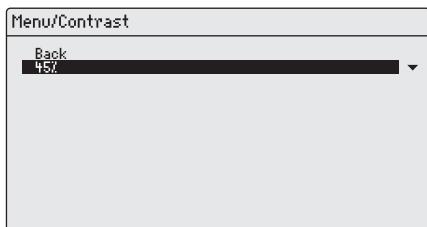

1. To select a parameter, press the arrow key.
2. Confirm with the *menu enter* key.  
The selected parameter is marked with a check mark.  
The main screen appears.

### 5.3.4 Changing a parameter value

Prerequisites

- A submenu with parameter values is selected.

1. For changing a value, use the rotary knob.
2. Confirm with the *menu enter* key.  
The main screen appears.

## 6 Operation

### 6.1 Switching on or off the Microinjector

**WARNING! Electric shock due to damage to device or mains/power cord.**

- ▶ Only switch on the device if the device and the mains/power cord are undamaged.
- ▶ Only use devices that have been properly installed or repaired.
- ▶ In case of danger, disconnect the device from the mains supply. Disconnect the mains/power plug from the device or the earth/grounded socket. Use the isolating device intended for this purpose (e.g., the emergency switch in the laboratory).

#### 6.1.1 Switching on the Microinjector

1. Take off the injection tube.
2. Switch on the Microinjector with the mains/power switch.  
The Microinjector performs a self test.  
The operating pressure is built up.  
The main screen appears.

#### 6.1.2 Switching off the Microinjector

1. Keep the *standby* key pressed.  
The message *Hold Standby to exhaust* appears.  
The pressure reservoir is emptied.
2. Switch off the Microinjector with the mains/power switch.

## 6.2 Switching on or off the standby mode

For short intermissions, you can use the standby mode. The Microinjector remains ready for operation.

#### 6.2.1 Switching on the standby mode

1. Press the *standby* key.
2. Take off the injection tube.  
The display shows *STANDBY*.  
The operating controls are deactivated.  
The pressure in the pressure reservoir is maintained.

## 6.2.2 Switching off the standby mode

Prerequisites

- The display shows *STANDBY*.
- 1. Take off the injection tube.
- 2. Press the *standby* key.  
The Microinjector performs a short self test.  
The display shows the main screen.

## 6.3 Determining the injection parameters

To determine the correct injection parameters, you can carry out a test injection with fluorescence dye.

### 6.3.1 Filling the capillaries with fluorescence dye

Prerequisites

- Use a capillary with an opening of 0.5 µm.
  - The injection tube is mounted to the universal capillary holder.
  - Eppendorf pipette and Microloader are available.
1. Fill the Microloader with fluorescing liquid.
  2. Equip the capillary with the Microloader.
  3. Insert the capillary into the universal capillary holder.

### 6.3.2 Carrying out a test injection

Prerequisites

- The Microinjector and the micromanipulator are connected and ready for operation.
  - The universal capillary holder is prepared with a capillary and fluorescence dye.
  - The universal capillary holder is clamped in the Eppendorf micromanipulator.
  - The Petri dish with adherent cells is prepared.
1. Connect the injection tube to the microinjector.
  2. Define the lower safety limit on the micromanipulator.
  3. Position the capillary above the cell.
  4. Press the *prog 1* key.
  5. Press the *inject* key.
  6. Check the injection visually.

### 6.3.3 Possible sources of error - cell inflates or bursts

The injected volume is too large.

-  A volume increase of about 10 % is an appropriate guide value for adherent cells.

1. Decrease the injection pressure or the injection time.
2. Repeat the test injection.

### 6.3.4 Possible sources of error - capillary is clogged

The injection material has clumped together or an old capillary was used.

1. Press the *clean* key.
2. Repeat the test injection.
3. Replace the capillary if it is not possible to clean it by rinsing.

### 6.3.5 Possible sources of error - liquid is not being injected

The interior cell pressure is higher than the injection pressure.

1. Increase the injection pressure.
2. Repeat the test injection.

### 6.3.6 Possible sources of error - capillary does not reach the cell

The cell is below the lower safety limit (*Z-axis Limit*) of the micromanipulator.

1. Adjust the lower safety limit on the micromanipulator.
2. Repeat the test injection.

### 6.3.7 Result – the injection parameters have been determined

If the correct injection parameters for the current test set-up have been determined, you can continue by performing the injection or you can save the parameter set.

- Saving the injection parameters –  
(see *Saving or changing the injection parameters on p. 35*)
- Performing the injection – (see *Injecting liquid on p. 33*)

## 6.4 Setting the compensation pressure $p_c$

The compensation pressure depends on the surface tension, the viscosity of the injection liquid and the diameter of the capillary opening. The setting of the compensation pressure must provide for a continuous slight leak of liquid at the capillary tip.

### Prerequisites

- The injection parameters are known.
- Use a capillary with an opening of 0.5 µm.
- ▶ Set the compensation pressure  $p_c$  with the rotary knob.  
The actual value is shown below the set value.  
The set value is displayed.

## 6.5 Setting the injection pressure $p_i$

The set injection pressure must be higher than the inside pressure of the cell. The injection pressure is built up from the start of the injection time.

### Prerequisites

- The injection parameters are known.
- Use a capillary with an opening of 0.5 µm.

**i** Guide values for the injection pressure are 50 hPa to 500 hPa (0.73 PSI to 7.20 PSI).

- ▶ Set the injection pressure  $p_i$  with the rotary knob.

## 6.6 Setting the injection time $t_i$

The injection time and the injection pressure determine the injected volume. The moment from which the injection time is counted depends on the set synchronization mode on the connected micromanipulator.

Beginning of time measurement during synchronization mode:

- *IMMEDIATE* – directly after triggering the injection
- *LIMIT* – when the lower safety limit is reached

### Prerequisites

- The injection parameters are known.

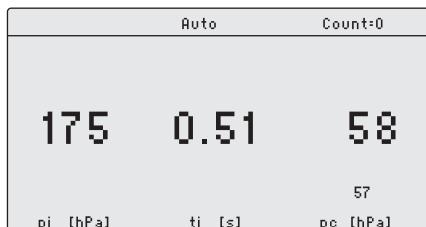

**i** Guide values for the injection time are 0.3 – 1.5 seconds.

- ▶ Set the injection time  $t_i$  with the rotary knob.

## 6.7 Setting the injection mode

### 6.7.1 Setting the automatic injection mode

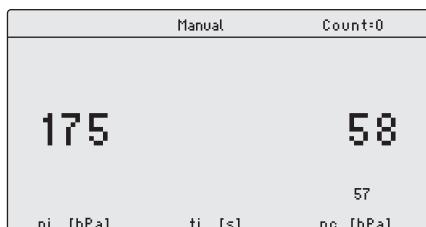

During the automatic injection mode, the set injection time is used. During the injection, the time elapses in reverse and the injection stops at zero.

- ▶ Press the *auto man* key.  
The *Auto* injection mode is displayed.  
The injection time is displayed.

### 6.7.2 Setting the manual injection mode

During the manual injection mode, **no** preset injection time is used. The injection only stops when releasing the *inject* key.

- ▶ Press the *auto man* key.  
The *Manual* injection mode is displayed.  
The injection time only is displayed  
when pressing the *inject* key.

## 6.8 Injecting liquid

You can trigger an injection with the *inject* key, the foot control or the hand control.

### 6.8.1 Automatically injecting liquid

#### Prerequisites

- The display shows *Auto*.
  - The injection parameters are set.
  - The micromanipulator is connected.
  - For the synchronization, *IMMEDIATE* is set on the micromanipulator.
- ▶ Press the *inject* key.  
The injection movement is triggered on the micromanipulator.  
The *inject* key is disabled during the injection.  
The elapsing injection time is displayed.

## 6.8.2 Manually injecting liquid

### Prerequisites

- The injection parameters are set.
- The micromanipulator is connected.
- For the synchronization, *IMMEDIATE* is set on the micromanipulator.

1. Press the *auto man* key.  
The display shows *Manual*.

2. Keep the *inject* key pressed.  
The injection of the liquid continues until the *inject* key is released.  
The progress of the injection time is displayed.

## 6.9 Replacing the capillary

1. Press the *menu enter* key.
2. Select the *Change capillary* menu.
3. Confirm with the *menu enter* key.  
The message *Capillary may be changed now* is displayed.  
The valve on the injection tube is closed.
4. Replace the capillary on the micromanipulator.
5. Press the *menu enter* key.  
The main screen appears.

## 6.10 Rinsing the capillary

You can rinse a clogged capillary using the cleaning function.

1. Keep the *clean* key pressed.  
The rinsing of the capillary continues until you release the *clean* key.  
The capillary is rinsed at maximum pressure.  
The pressure build-up is shown in a chart.

## 6.11 Setting the injection counter to zero

For each injection performed, the counter is increased by one. You can reset the counter to zero.

1. Press the *count* key.  
The *Count* display is reset to zero.

## 6.12 Calling up saved injection parameters

The program keys are predefined with exemplary parameter sets for standard applications. One parameter set consists of injection pressure, injection time, compensation pressure and injection mode.

The parameter sets are suited for the following standard applications:

- *prog 1* – For adherent cell injection with a capillary diameter of approx. 0.5 µm.
- *prog 2* – For pronucleus injection with a capillary diameter of approx. 0.5 µm.

| Parameter set | Injection pressure<br>$p_i$ | Injection time<br>$t_i$ | Compensation pressure<br>$p_c$ | Injection mode |
|---------------|-----------------------------|-------------------------|--------------------------------|----------------|
| <i>prog 1</i> | 150 hPa                     | 0.30 s                  | 50 hPa                         | <i>Auto</i>    |
|               | 2.18 PSI                    | 0.30 s                  | 0.73 PSI                       |                |
| <i>prog 2</i> | 110 hPa                     | –                       | 15 hPa                         | <i>Manual</i>  |
|               | 1.60 PSI                    | –                       | 0.22 PSI                       |                |

### 6.12.1 Calling up saved injection parameters

1. Press the *prog 1* or *prog 2* key.

An acoustic signal will sound.

The LED above the program key is illuminated.

The selected program is active.

The parameter set is displayed.

## 6.13 Saving or changing the injection parameters

You can save individual injection parameters on the two program slots. One parameter set consists of injection pressure, injection time, compensation pressure and injection mode.

### 6.13.1 Saving injection parameters

The current parameter set is overwritten. Please refer to the table for the default parameter sets (Tab. on p. 35).

1. Set the injection parameters.
2. Select the injection mode automatically or manually.
3. Keep the *prog 1* or *prog 2* key pressed for approx. two seconds.

An acoustic signal will sound.

The LED above the program key is illuminated.

The injection parameters are saved.

### 6.13.2 Changing the saved injection parameters

**i** The current parameter set is overwritten. Please refer to the table for the default parameter sets (Tab. on p. 35).

1. Change the injection parameters.
2. Keep the *prog 1* or *prog 2* key pressed for two seconds.  
An acoustic signal will sound.  
The LED above the program key is illuminated.  
The new value is saved.

## 6.14 Adjusting the device settings

### 6.14.1 Change capillary function – Changing the capillary

1. Press the *menu enter* key.
2. Select the *Change capillary* menu.
3. Confirm with the *menu enter* key.  
You can change the capillary.
4. Quit the menu with the *menu enter* key.

### 6.14.2 Pressure unit function – Selecting the pressure unit

1. Press the *menu enter* key.
2. Select the *Pressure unit* menu.
3. Confirm with the *menu enter* key.
4. Select the pressure unit.
5. Confirm with the *menu enter* key.

### 6.14.3 Beeper function – Switching on/off the signal tone

1. Press the *menu enter* key.
2. Select the *Beeper* menu.
3. Confirm with the *menu enter* key.
4. Select the mode.
5. Confirm with the *menu enter* key.

### 6.14.4 Contrast function – Setting the display contrast

1. Press the *menu enter* key.
2. Select the *Contrast* menu.
3. Confirm with the *menu enter* key.
4. Set the parameter value with a rotary knob.
5. Confirm with the *menu enter* key.

#### **6.14.5 Illumination function – Switching on/off the display illumination**

1. Press the *menu enter* key.
2. Select the *Illumination* menu.
3. Confirm with the *menu enter* key.
4. Select the mode.
5. Confirm with the *menu enter* key.

#### **6.14.6 Continuous flow function – Setting the constant operating pressure**

1. Press the *menu enter* key.
2. Select the *Continuous flow* menu.
3. Confirm with the *menu enter* key.  
The screen for *Continuous flow* appears.
4. Set the operating pressure  $p_w$  with the rotary knob.
5. Confirm with the *menu enter* key.

#### **6.14.7 Drain pressure supply function – Draining the pressure reservoir**

1. Press the *menu enter* key.
2. Select the *Drain pressure supply* menu.
3. Press the *menu enter* key.  
The venting opens for a short time.  
The condensation water is discharged.

## 6.15 Inserting the capillary into the capillary holder

### **WARNING! Risk of injury due to flying capillaries and glass splinters.**

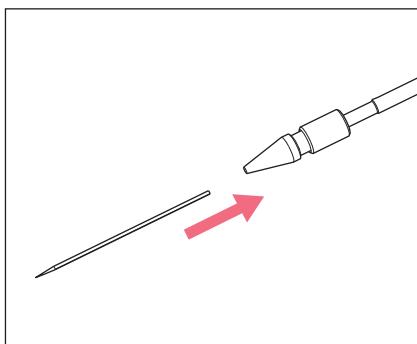

If exposed to high pressures, capillaries can detach themselves from the grip heads and become projectiles.

Capillaries can crack as a result of incorrect handling.

- ▶ Wear protective goggles.
- ▶ Never aim capillaries at people.
- ▶ Use capillaries with an outer diameter that matches the grip head specifications.
- ▶ Always mount / dismount capillaries when they are depressurized.
- ▶ Mount the capillary correctly in the grip head.
- ▶ Do not touch the capillary with the Petri dish or other objects.

### Prerequisites

- Grip head 0
- Capillary with an outer diameter of 1.0 mm to 1.1 mm

1. Insert the capillary up to the stop.
2. Tighten the grip head.

## 6.16 Inserting Femtotips into the capillary holder

1. Remove the grip head.
2. Screw the adapter for Femtotips into the capillary holder.
3. Screw Femtotips into the adapter and tighten.

## 7 Troubleshooting

### 7.1 General errors

| Problem  | Cause   | Solution  |
|--|---|---|
| No liquid is injected.                           | <ul style="list-style-type: none"> <li>Capillary is clogged.</li> </ul>                   | <ul style="list-style-type: none"> <li>▶ Clean the capillary using the <i>clean</i> function.</li> <li>▶ If the error persists, replace the capillary.</li> </ul> |
| Capillary does not reach the injection position. | <ul style="list-style-type: none"> <li>The lower safety limit is set too high.</li> </ul> | <ul style="list-style-type: none"> <li>▶ Set the lower safety limit on the micromanipulator.</li> </ul>   |

| Warning #40 | <ul style="list-style-type: none"><li>• Capillary is broken.</li><li>• Injection tube is not separated from the device when switching on.</li><li>• Injection tube connected without equipped capillary.</li><li>• Leak in the area of the capillary, holder, injection tube or their connections.</li><li>• Warning appears immediately when connecting the tube.</li><li>• Storage pressure is too low.</li><li>• System error</li></ul> | <ul style="list-style-type: none"><li>▶ Insert a new capillary.</li><li>▶ Take off the injection tube.<br/>▶ Wait until the initialization phase is completed.<br/>▶ Connect the injection tube.</li><li>▶ Connect an equipped capillary.</li><li>▶ Check all connections and seals from the FemtoJet to the capillary.<br/>▶ Exchange defective o-rings.</li><li>▶ Connect the tube by means of the <i>Change capillary</i> function.<br/>▶ Switch off <i>Fluctuation detection</i> function.</li><li>▶ Wait until the storage pressure is reached.</li><li>▶ Switch the device off and back on again.<br/>▶ If the error persists, please contact the authorized service.</li></ul> |

**8 Maintenance****8.1 Exchanging the o-rings in the grip head**

If you notice leaks on the grip head, the o-rings must be exchanged.

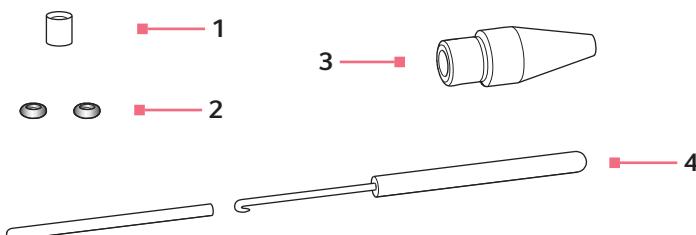

Fig. 8-1: Grip head 4 with removal tool

**1 Distance sleeve**

**3 Grip head 4 size 0**

**2 O-rings**

Inner diameter 1.0 mm

**4 Removal tool**

Hook with protective sleeve

**8.1.1 Remove the o-rings and distancing sleeves**

Prerequisites

- The grip head has been unscrewed from the capillary holder.
- The capillary has been removed from the grip head.

The hook of the removal tool is used to pull out the o-rings and the distance sleeve.

1. Pull out the first o-ring.
2. Pull out the distance sleeve.
3. Pull out the second o-ring.

### 8.1.2 Inserting the o-rings and the distance sleeve

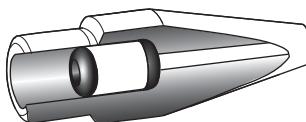

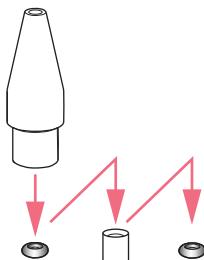

Fig. 8-2: Cross section with correctly positioned o-rings and spacing sleeve

#### Prerequisites

- The o-rings are clean and free of damage.
- The grip head is clean and free of damage.
- A clean and flat surface is available.
- O-rings matching the grip head size are available.

1. Place the new o-rings and the distance sleeve on a flat surface.
2. Press the grip head vertically onto the first o-ring and push the o-ring into the grip head using the capillary holder.
3. Press the grip head vertically onto the distance sleeve and push the distance sleeve into the grip head using the capillary holder.
4. Press the grip head vertically onto the second o-ring and push the o-ring into the grip head using the capillary holder.

## 8.2 Exchanging the o-ring in the Femtotips adapter

If the o-ring is defective and leaky, it must be exchanged.

Fig. 8-3: Adapter for Femtotips

**1 O-ring**  
Inner diameter 1.5 mm

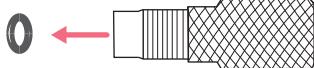

**2 Adapter**

### 8.2.1 Exchanging the o-ring

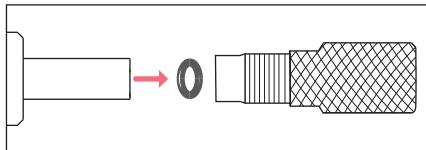

#### Prerequisites

- An o-ring with an inner diameter of 1.5 mm is prepared.
- Femtotips is removed.

► Extract the o-ring with the hook of the removal tool.

► Insert the new o-ring and push it into the adapter with the capillary holder.

## 8.3 Replacing fuses

### DANGER! Electric shock.

- ▶ Switch off the device and disconnect the power plug before starting maintenance or cleaning work.

The fuse holder is located between the mains connection socket and the mains power switch. The fuses may only be replaced with the same type of fuse.

1. Disconnect the mains plug.
2. Pull the fuse holder out completely.
3. Replace the defective fuse.
4. Insert the fuse holder.

## 8.4 Cleaning

### DANGER! Electric shock due to the ingress of liquid.

- ▶ Switch off the device and disconnect the power plug before starting cleaning or disinfection work.
- ▶ Do not allow any liquids to penetrate the inside of the housing.
- ▶ Do not spray clean/spray disinfect the housing.
- ▶ Only plug the device back in if it is completely dry, both inside and outside.

### NOTICE! Damage from the use of aggressive chemicals.

- ▶ Do not use any aggressive chemicals on the device or its accessories, such as strong and weak bases, strong acids, acetone, formaldehyde, halogenated hydrocarbons or phenol.
- ▶ If the device has been contaminated by aggressive chemicals, clean it immediately using a mild cleaning agent.

Clean the device at least every 4 weeks.

1. Wipe the painted parts and the aluminum surfaces with a cloth and mild detergent.
2. Polish with a dry cloth.

## **8.5 Disinfection/decontamination**

- i**
- ▶ Select disinfection methods that comply with the legal regulations and guidelines for your area of application.
  - ▶ If you have any questions regarding cleaning, disinfection and decontamination, please contact Eppendorf AG.

### Prerequisites

- All device parts are cleaned.
- A disinfectant containing alcohol (such as isopropanol or spirit) is available.
- ▶ Wipe all parts of the device with a cloth and the disinfectant.

## **8.6 Hints with regard to service intervals**

The display shows the following message:

- *Please contact local service soon* – Contact the authorized service.
- *Please contact local service now* – Have the service performed by the authorized service.

## **8.7 Service and maintenance**

Application-specific service and safety inspections are not required.

- i** Software updates may only be performed by authorized service personnel.

The Eppendorf AG service team is available to service and certify your device.

Service provisions:

- Service
- Operational qualification (OQ) according to manufacturer's specifications
- Electrical safety testing according to country-specific regulations
- Software update

Information on the services offered can be found on our webpage:

[www.eppendorf.com/epservices](http://www.eppendorf.com/epservices).

## **9 Technical data**

|                      |   |
|----------------------|---|
| Ambience             | Only for use indoors.   |
| Ambient temperature  | 15 °C – 40 °C   |
| Relative humidity    | 10 % – 75 %, non-condensing.  |
| Atmospheric pressure | 795 hPa – 1060 hPa<br>Use up to a height of 2000 m above sea level. |
| Degree of pollution  | 2 (IEC 664)   |

## Transport, storage and disposal

54 FemtoJet® 4i

English (EN)

### 10 Transport, storage and disposal

#### 10.1 Storage

|                             | Air temperature | Relative humidity | Atmospheric pressure |
|-----------------------------|-----------------|-------------------|----------------------|
| In transport packaging      | -20 °C – 70 °C  | 10 % – 80 %       | 300 hPa – 1060 hPa   |
| Without transport packaging | –               | –                 | –                    |

#### 10.2 Decontamination before shipment

If you are shipping the device to the authorized Technical Service for repairs or to your authorized dealer for disposal please note the following:

##### **WARNING! Risk to health from contaminated device**

1. Observe the information on the decontamination certificate. You can find it as a PDF document on our webpage ([www.eppendorf.com/decontamination](http://www.eppendorf.com/decontamination)).
2. Decontaminate all the parts you would like to dispatch.
3. Include the fully completed decontamination certificate in the package.

#### 10.3 Transport

|                   | Air temperature | Rel. humidity | Atmospheric pressure |
|-------------------|-----------------|---------------|----------------------|
| General transport | -25 °C – 60 °C  | 10 % – 95 %   | 30 kPa – 106 kPa     |
| Air freight       | -40 °C – 55 °C  | 10 % – 95 %   | 30 kPa – 106 kPa     |

Carry out the following steps before transport:

1. Pull off the rotary knobs and pack them separately in the provided bag.
2. Pack the Microinjector in the original packaging.
3. Only use the original packaging for transporting the Microinjector.

## 10.4 Disposal

In case the product is to be disposed of, the relevant legal regulations are to be observed.

### Information on the disposal of electrical and electronic devices in the European Community:

Within the European Community, the disposal of electrical devices is regulated by national regulations based on EU Directive 2012/19/EU pertaining to waste electrical and electronic equipment (WEEE).

According to these regulations, any devices supplied after August 13, 2005, in the business-to-business sphere, to which this product is assigned, may no longer be disposed of in municipal or domestic waste. To document this, they have been marked with the following identification:

Because disposal regulations may differ from one country to another within the EU, please contact your supplier if necessary.
