

- EZlabpure™ GL45 VersaCap® cap provides a convenient gripping surface, while enabling bottle stacking and labeling
- Conveniently sold presterilized
- PS and PETG material available
- Manufactured in a class 100,000 cleanroom
- Made from USP class VI materials
- **Sterilized in the USA** according to VDMAX25 guidelines (SAL 10⁻⁶) 
- Manufactured according to ISO 13485 standards in North America

Foxx Life Sciences' new spatially designed sterile EZlabpure™ Media Bottles, Polystyrene (PS) and PETG, have been designed specifically for Life Science researchers to store common solutions such as tissue culture media, serum, and buffers. The lower height bottle has features that improve the media flow for easy pouring. The narrow bottle shoulder, combined with the molded finger grips, improves the ability to securely grip the bottle with gloved hands.

Our leak free full thread polypropylene GL45 VersaCap® bottle cap allows for added media security and enables easy handling and carrying of the bottle. The innovative cap also allows for easy uncapping, tightening, and bottle labeling solutions such as tissue culture media, serum, and buffers. Our bottles are optically clear and offer excellent impact resistance. They are also designed to handle full vacuum and can be used with Autofil2™ filtration system. Foxx Life Sciences' media bottle is manufactured in a Class 7 clean room in North America.
