Labworldsoft® 6 Screening System

/// Data Sheet

The laboratory software labworldsoft® 6 Screening System enables the screening and automation of electrosynthesis with the IKA Screening System. On the PC, processes can be automated, reaction parameters can be defined and experiment data can be easily recorded. The data can be used for reaction condition optimization, result analysis and statistical study.

This software licence provides access to the following devices from the labworldsoft® device library: IKA Screening System, IKA RCT digital magnetic stirrer, Rohde & Schwarz HMP 4040 power supply.

designed for scientists

Try it free of charge

You can test labworldsoft® 6 for 30 days free of charge: During this time, you have access to the entire device library with over 700 laboratory devices as well as to all functions that are required for your new digital laboratory. There is no obligation for you. After 30 days, you either choose one of our licenses or your access will expire.
