Z MODELS' STAND — AND DELIVER

Ergonomic, slim design for true comfort viewing

- UNITRON's newly designed, slim LED stand delivers superb brightness with a true-color LED illumination system.
- The S-LED transmitted light base measures only 41mm high, allowing the eyepoint to be lowered and making accessing samples simple and easy.
- With its wide stage surface and fine adjustment control offering increased sensitivity, the S-LED stand is an exceptional choice for the inspection and manipulation of petri dishes and other specimen containers.

STANDS AND ILLUMINATION

A wide range of stands and illumination options are available to meet the needs of any application. UNITRON offers plain focusing stands, LED stands, boom stands, articulating (flex) arm stands, pole stands, diascopic illumination stands, along with a variety of LED ring lights and fiber optic illuminators.

▲ Z10 Pole Stand with MI-LED Dual Gooseneck Illuminator

▲ UNITRON Z10 Series Ergo Ball Bearing Stand with LED Ring Light

INDUSTRIAL APPLICATIONS

READY FOR THE WORLD OF HARD WORK

UNITRON's Z Series provides a high value, ruggedly built solution to meet the strict demands required in today's global environment for quality assurance, materials analysis, production lines, assembly and failure analysis.

DISTORTION-FREE

Distortion-free optics for critical inspection provide outstanding images without blur or color fringe, long working distances and shadow-free illumination.

ERGONOMIC DESIGN

Ergonomically designed modular workstation systems promote productivity, improved performance and efficiency, leading to less absences, and helping to improve profitability.

WIDE RANGE OF ACCESSORIES

A large range of objectives, stands and illuminators are available to customize the system to meet your mechanical and optical needs.

IMAGING MADE EASY

PERFECT FOR PEER REVIEWING

Designed to meet the advanced needs of researchers, medical laboratories and universities, UNITRON's Z Series offers best in class performance, value and versatility for multiple display and group viewing applications.

SUPERB DIGITAL IMAGING

With a wide variety of CCD, CMOS and HD cameras to choose from, digital imaging is fast and easy, allowing for publication grade images.

HIGH QUALITY OPTICS

High resolution, with a high level of chromatic aberration correction to provide outstanding images throughout the magnification range.

A modular configuration allows for dissections and other applications using a wide range of magnifications.

FLUORESCENCE - BRIGHT, HIGH CONTRAST IMAGES

The newly designed epi-fluorescence attachment with 4 position filter slider provides a lower signal-to-noise ratio and a higher transmission optical lens system to produce best-in-class, bright, clear fluorescence images.

Macro imaging of fluorescence is a tremendous tool for biological research and is widely used in genetics, developmental biology and soil studies.

Using the most advanced LED or Metal Halide illumination systems, UNITRON's fluorescence systems offer both tremendous value and performance.

INNOVATION AT ITS BEST. SUPERIOR OPTICAL PERFORMANCE. UNPARALLELED ERGONOMICS.

EFFICIENCY IN DESIGN FOR INCREASED PRODUCTIVITY

The Z SERIES Parallel-Optics design ensures better, faster and more reliable identifications and sample measurements. With an industry-leading 24mm field of view, the Z Series parallel-optic lens system delivers users an image with extremely high resolution and a large depth of field that avoids distortion or aberration.

GET CLOSE-UP AND PERSONAL THE FIRST TIME... EVERY TIME

Reliability & Repeatability

A continuous zoom with click stops assures users of consistent reproducible results.

IMAGING MADE EASY

Digital Imaging

As a modular system, any Z Series Microscope can be turned into a digital imaging system. A wide range of CCD, CMOS and HD cameras allow for image capture, share, measurement, annotation, stacking, archiving and more.

IT'S EASY TO SEE AT ANY DEGREE

Variety of Observation Tubes

Users can choose either a 20° inclined binocular observation tube with extended eyetubes or a tilting binocular observation tube.

The tilting binocular eyetubes can be inclined from 0 to 35° and the eyetubes can be rotated 180° to increase the height of the eyetubes an additional 3 inches.

For hours of fatigue-free viewing the tilting binocular eyetubes are ideal for long observation periods.

EXCELLENCE IN STEREO MICROSCOPY

For over 60 years UNITRON has continued to deliver best in class solutions to science and industry. Combining outstanding optical performance, high zoom ranges, a modular design and excellent resolution, UNITRON's Z Series delivers a highly versatile instrument for use in a wide variety of applications.

DESIGNED FOR YOU

Modular Design for More Options

- At the core of UNITRON's Parallel-Optics zoom stereo is the modular design of the zoom body. The parallel-optic design allows for the utmost versatility for advanced functions by allowing the addition of intermediate accessories like beam splitters for digital imaging, on-axis coaxial epi-illuminators, and iris diaphragms.
- Unitron offers 3 different zoom bodies for a choice of magnification ranges designed to insure the best performance and value.
- With a choice of either an ergo tilting or a 20 degree inclined, extended binocular eyetube, UNITRON can provide a solution for any application or budget.

BECAUSE CLARITY IS THE ONLY OPTIC OPTION

High Contrast Images. Sharp Crisp Optics Wide Magnification Range

UNITRON's Z Series newly designed optical system delivers high resolution images with no distortion, making these instruments an excellent choice for industrial and biological applications.
